## “Do You Suffer from these Seven Symptoms of this Often Misdiagnosed Problem?”

*Tens of millions suffer, and often don't know where to turn...*

Dear friend,

The problem is often misdiagnosed, or not diagnosed at all. But, it affects the lives of between 10 and 20 million Americans.

This problem can cause:

1. Numbness.
2. Burning pain.
3. Cramping.
4. Sharp, electric pain.
5. Hurt when you walk.
6. Difficulty sleeping from leg/foot discomfort.
7. Prickling/tingling feelings.

If you suffer from one or more of these problems, you may have peripheral neuropathy. And, if you do, you're not alone.

These problems can be caused by diabetes, hereditary disorders, inflammation, medications such as cholesterol lowering (statin) drugs, and more.

I have a big interest in, and have studied this class of conditions, collectively known as "peripheral neuropathies", for some time now. In fact, helping people with these problems has become a primary focus of mine.

It's not unusual for me to hear stories from patients who've suffered for years with terrible symptoms.

If that describes you, then perhaps I can help. I practice a multi-pronged attack to these problems. It's a program that is specifically designed to relieve these tough symptoms.

That's why I've put together the **“Peripheral Neuropathy Pain Treatment Program”** for anyone suffering from the symptoms of peripheral neuropathy pain. And, the beautiful thing is that when these health situations are resolved, people have great improvements in the quality of their lives.

I'm a proud member of the Neuropathy Treatment Centers of America. This has given me knowledge and tools that have been tested, researched, and found to be effective.

**Here's what one of your neighbors had to say:**

*“I was always in pain but it especially hurt when I drove. After I started getting treatment from Dr. Scott, I stopped having the pain in my arm. He has helped me a lot.”*

-Robert

Now, you must know that Robert's story is the result of an effective treatment plan and ongoing care. However, all patients respond differently to care. Each case must be considered individually.

**Innovative care - Powerful results**

You can't have nerve pressure or 'pinched nerves' and get better from neuropathy.

I offer non-invasive care by removing nerve interference caused by spinal misalignment. This procedure is called an "adjustment", which is a gentle alignment to the spine. This frees the nerves, and the damage caused by old herniated discs or arthritis.

We also use Low Level Light Therapy (LLLT). It's a newly developed tool that's very safe. This non-invasive healing light has been proven to work wonders on peripheral neuropathy symptoms.

**About Me**

I have been practicing for ten years here in Anderson, ever since I moved back to the area with my wife, Kelly. That's her in the picture with me on our cruise to the Bahamas. Our goal is to get the word out to as many people as we can, so we can help as many people as possible get relief from the symptoms.

**Do You Qualify For This New Program?**

When you call and make an appointment, I'll perform a highly-specialized Qualitative Clinical

Scoring System of the Peripheral Nervous System to see if we may be able to help. But, please call right away because we can take only the first 27 callers. If you are one of these 27, I'll do this Evaluation and Qualifying Process completely for just \$17.

My office is called North Anderson Chiropractic and we are at 1817 N. Madison Ave, just north of Community Hospital. So, please call my assistants Kim or Becky, at 765-642-1100. I don't want you to miss out on this golden opportunity! Due to the nature of this offer, it will end on February 12.

Add some peace to your life or the life of someone you love. Call me today to make an appointment. We can help you.

Thank you,

*Douglas A. Scott, D.C.*

**P.S.** Does your spouse, family member, or friend suffer from peripheral neuropathy? This offer is also available to them, too. Their lack of health affects your life also. Maybe this will be your chance to really give them the help they need.

**P. S. S.** You're smart, and you know that a doctor can never guarantee a cure from any condition, as all patients respond differently to care.

**P.S.S.S.** If you want more information, come in and fill out a preliminary Subjective Peripheral Neuropathy Screening Questionnaire.
