

M**Mammography**

THE IMAGING CENTER

AT PRESBYTERIAN HOSPITAL OF GREENVILLE

In the Past...

Mammograms were confined to film

Presently...

Mammograms have jumped into the digital era

The Future...

Digital Mammography with CAD has revolutionized the industry

With the new “GE Essential All-Digital Mammography System with CAD”, the most advanced technology of its kind in North Texas, the future is now available at The Imaging Center at Presbyterian Hospital of Greenville.

What Role Does CAD Play?

A recent published report found that when CAD (Computer Assisted Detection) was used to assist in mammography reading, detection rates for small invasive breast cancers (less than 1.0 cm) increased by 164% and cancers were recognized and diagnosed in women at a younger age.

The benefits of Digital Mammography for all women are:

- Improved visibility of the breast tissues compared to film
- Exam time reduced by 50%
- Immediate review via electronic distribution
- All mammograms come with automatic Computer Assisted Detection (CAD)
